

Market Sector	Education
Site	University of East London Docklands Campus
Client	UEL
Main Contractor	HBG Construction
Engineer	BDP
Duration	60 weeks
Value	£3.10m

Description

We carried out both the enabling works, groundworks, insitu RC & external works packages on this phase of UEL development. The enabling works comprised a bulk excavation and a stabilised platform, forming part of the permanent works and pile mat. The ground work formed a complex matrix of ground beams, wrapped in several layers of insulation and waterproofing, which is ideally suited for use in a stabilised platform. Particular attention had to be paid to environmental issues as we were working dock-side of the Royal Dock and almost under the flight path of planes out of City Airport.
