Value	<b>£3.40m</b>

### **Description**

We were employed to deliver the sub-structure and structural frame of this impressive award winning dance centre. The insitu RC sloping roof is of particular note, and presented some logistical challenges to its construction.

This landmark building will serve to demonstrate the Centre's enduring local, national and international presence, and it has been identified as the focal point for the social and physical regeneration of Deptford and the surrounding area. It will provide state-of-the-art facilities for the training and professional development of dance artists and scholars, as well as offering associated training and educational opportunities to organisations and individuals residing in the area.
