

Market Sector	Commercial Structural
Site	41 Lothbury London EC2
Client	Royal Bank of Scotland: Grosvenor Estates
Main Contractor	Wates
Engineer	Campbell Reith
Duration	45 weeks
Value	£4.50m

Description

We were initially engaged to carry a temporary and enabling works package that consisted of underpinning, façade retention and structural modifications to the various levels of basement. A major factor here is that the street level floor is a grade II listed banking hall, which was to retain its original features. Following on from this package we took on all of the structural modifications and insitu RC works and managed a complex interface with the steel Frame and M&E contractors.
