Engineer	John Sisk & Son Ltd
Architect	John Sisk & Son Ltd
Duration	9 months
Value	£1.10m

Description

The project involved the use of state of the art 3 dimensional computer modelling to produce a superstructure design solution. In excess of 1300 tonnes of framing will be erected to produce the building's skeleton in as little as 12 weeks.

On completion the 24 metre high building will provide a strong, architectural addition to the other 21st century developments completed on the Peninsula.

Four restaurants totalling over 1100m2 of space are also being developed at the front of the complex, which features a central courtyard area.
